

# Thornleigh Inlet/Outlet Main

## Delivering our water future

Sydney Water is delivering a transformative investment in our city to ensure our water, wastewater and stormwater systems meet the needs of our customers now and in the future.

Our infrastructure delivery is timed to support the NSW Government's growth ambitions and is aligned with housing supply policy. New infrastructure, amplifications and upgrades will ensure the resilience and reliability of our water supply for generations to come.

The expansive program of work is being delivered across Greater Sydney, including the Blue Mountains and the Illawarra. A significant number of projects are currently in planning, while many are in delivery or have been completed.

Explore the [Major Projects Pipeline](#).

Greater Sydney's population is forecast to increase by more than 2 million people over the next 30 years.

Sydney Water is investing now to transform and integrate our water, wastewater, stormwater, and recycled water systems to ensure we can continue to provide safe, reliable and affordable services to customers as the region continues to grow.

One of the ways we are doing this is by duplicating the 1.4 km drinking water pipeline between Thornleigh Reservoir and the Thornleigh-Wahroonga Water Pumping Station. The proposed pipeline will increase the resilience of local water supply by allowing water to be transferred between the two locations to cater for the growing population.

Our work will ensure we can continue to provide clean, safe drinking water to our customers as the area continues to grow.

## Investment

**\$100 – \$250**  
million
